

SevaAI – Apki Awaaz, Sarkar Tak

Overview

SevaAI is an agentic civic grievance platform that enables citizens to report municipal issues through voice or text while autonomously classifying, prioritizing, routing, escalating, and generating governance intelligence from complaints.

Unlike traditional complaint portals, SevaAI moves cities from reactive complaint handling to proactive infrastructure management.

Problem Statement

Citizens struggle with fragmented government portals, language barriers, poor complaint tracking, and incorrect routing of civic grievances.

Municipal bodies often lack tools to identify emerging infrastructure risks from complaint data.

Key Features

Citizen Side

- Voice and text complaint filing
- Browser-based speech recognition
- Automatic complaint classification
- Department routing
- AI-generated reasoning trace
- Priority and SLA prediction
- Complaint confirmation with AI analysis

Autonomous Agents

- Complaint Analysis Agent
- Escalation Agent
- Governance Intelligence Agent

Government Side

- Ward-wise heatmap generated from real complaints

- Predictive infrastructure alerts
- Root cause prediction
- Recommended preventive actions
- Civic intelligence dashboard

Agent Workflow

Citizen Complaint

- ⇒ Speech/Text Input
- ⇒ AI Complaint Analysis Agent
- ⇒ Category + Department + Priority Prediction
- ⇒ Reasoning Generation
- ⇒ Complaint Storage
- ⇒ SLA Monitoring Agent
- ⇒ Automatic Escalation
- ⇒ Governance Intelligence Generation
- ⇒ Government Dashboard

Tech Stack

Frontend:

- React
- Tailwind CSS
- Web Speech API

Backend:

- FastAPI

Database:

- Supabase PostgreSQL
- PostGIS

AI:

- Claude API / Rule-based AI pipeline

Automation:

- n8n

Deployment:

- Vite
- Supabase

AI Components

Complaint Analysis Agent

Responsible for:

- Language understanding
- Complaint classification
- Department assignment
- Priority scoring
- Reason generation

Escalation Agent

Autonomously:

- Monitors SLA deadlines
- Detects unresolved complaints
- Escalates cases
- Notifies citizens

Governance Intelligence Agent

Analyzes historical complaint patterns to:

- Detect hotspots
- Predict infrastructure failures
- Generate ward-level insights
- Recommend preventive action

Real World Impact and Cost Benefit Analysis

A single averted infrastructure emergency (collapsed road, burst main) in a metro city costs ₹50–200 lakh to fix reactively. SevaAI's annual cost per city is a fraction of that. The system pays for itself by preventing one major failure per year.

- Eliminates manual complaint routing
- Reduces resolution delays
- Enables proactive governance
- Improves transparency and citizen trust

Future Scope

- Multilingual LLM support
- Image-based damage assessment
- Community validation - When a complaint is filed, nearby citizens can VALIDATE ISSUE / ALREADY FIXED which can either escalate issue or mark as fixed if not marked fixed by officer already.
- WhatsApp integration
- Seva Score for municipal departments
